

Filecrypt Test Cases

filecrypt - Test Cases

=====

Test 1: Basic encrypt and decrypt

File encrypted successfully -> test1_enc.txt

File decrypted successfully -> test1_dec.txt

PASS - decrypted file matches original

Test 2: Wrong key produces different output

File decrypted successfully -> test2_wrong.txt

PASS - wrong key produces different output

Test 3: Special characters and symbols

File encrypted successfully -> test3_enc.txt

File decrypted successfully -> test3_dec.txt

PASS - special characters encrypted and decrypted correctly

Test 4: Binary file encryption and decryption

File encrypted successfully -> test4_enc.bin

File decrypted successfully -> test4_dec.bin

PASS - binary file encrypted and decrypted correctly

Test 5: Missing arguments handled gracefully

Error: missing required arguments.

Usage: ./filecrypt -e|-d -k <key> -i <input file> -o <output file>

-e encrypt mode

-d decrypt mode

-k <key> key string

-i <file> input file

-o <file> output file

PASS - missing output file argument caught correctly

Results: 5 passed, 0 failed
